

คณะวิศวกรรมศาสตร์

มหาวิทยาลัยสงขลานครินทร์

การสอบกลางภาค ประจำภาคการศึกษาที่ 1
วันที่ 5 สิงหาคม 2553
เวลา 09.00-12.00 น.
วิชา 215-231 Thermodynamics II
ห้อง A401, S 102, S 103
216-332 Engineering Thermodynamics II

កំសៀង

1. ข้อสอบมีทั้งหมด 6 ข้อ / ให้ทุกข้อในข้อสอบ
 2. อนุญาตให้นำเครื่องคิดเลขเข้าห้องสอบได้
 3. อนุญาตให้นำกระดาษ A4 จำนวน 1 แผ่น เข้าห้องสอบได้

รศ.ก้าวลด ประทีปชัยกุล

ថ្វីល-សកែ..... រាជវិទ្យាល័យ.....

- 1a) A steam power plant receives heat from a furnace at a rate of 280 GJ/h. Heat loses to the surrounding air from the steam as it passes through the pipes and other components are estimated to be about 8 GJ/h. If the waste heat is transferred to the cooling water at a rate of 145 GJ/h, determine (a) net power output (b) the thermal efficiency of this power plant. (10 marks)

.....
.....

- 1b) An inventor claims to have developed a heat engine that receives 750 kJ of heat from a source at 400 K and produces 250 kJ of net work while rejecting the waste heat to a sink at 300 K. Is this a reasonable claim ? Why? (10 marks)

2) Circle the right answer in the following questions. (12marks)

- a) A piston-cylinder device contains helium gas. During a reversible, isothermal process, the entropy of the helium will (never, sometimes, always) increase.

b) A piston-cylinder device contains nitrogen gas. During a reversible, adiabatic process, the entropy of the nitrogen will (never, sometimes, always) increase.

c) The entropy of steam will (increase, decrease, remain the same) as it flows through an actual adiabatic turbine.

d) The entropy of the working fluid of the ideal Carnot cycle (increases, decreases, remains the same) during the isothermal heat addition process.

e) The entropy of the working fluid of the ideal Carnot cycle (increases, decreases, remains the same) during the isothermal heat rejection process.

f) During a heat transfer process, the entropy of a system (always, sometimes, never) increases.

3) During the isothermal heat addition process of a Carnot cycle, 900 kJ of heat is added to the working fluid from a source at 400°C . Determine (a) the entropy change of the working fluid (b) the entropy change of the source (c) the total entropy change for the process.

(15 marks)

- 4) An insulated piston-cylinder device contains 5 L of saturated liquid water at a constant pressure of 150 kPa. An electric resistance heater inside the cylinder is now turned on, and 2200 kJ of energy is transferred to the steam. Determine the entropy change of the water during this process, in kJ/K. (25 marks)

(25 marks)

ชื่อ-สกุล..... รหัส.....

- 5) A heat engine receives heat from a source at 1500 K at a rate of 700 kJ/s, and it rejects the waste heat to a medium at 320 K. The measured power output of the heat engine is 320 kW, and the environment temperature is $25^{\circ}C$. Determine (a) the reversible power (b) the rate of irreversibility (c) the second law efficiency of this heat engine. (15 marks)

- 6) A freezer is maintained at $-7^{\circ}C$ by removing heat from it at a rate of 79 kJ/min. The power input to the freezer is 0.5 kW, and the surrounding air is at $24^{\circ}C$. Determine (a) the reversible power (b) the irreversibility (c) the second law efficiency of this freezer. (15 marks)
