1. Determine the smallest positive real root of

$$
f(t)=9 e^{-0.7 t} \cos (4 t)-3.5
$$

(a) Using the Newton-Raphson method. Employ initial guess of 0.3 and a stopping criterion of $0.01 \%$.
(b) Using the secant method. Employ initial guesses of 0.2 and 0.4 and a stopping criterion of $0.01 \%$.
